**CRYOcheck™ Factor Deficient Plasmas**

**CRYOcheck** Factor Deficient Plasmas are intended for use as deficient substrates in clot-based factor assays using the one-stage prothrombin time (PT) and activated partial thromboplastin time (APTT), and provide users with enhanced convenience and increased confidence in testing results. **CRYOcheck** Factor Deficient Plasmas are frozen, platelet-poor plasmas which are immunodepleted and assayed at less than 1% for the specific factor by functional and antigenic methods\(^*\). The plasma is buffered and frozen, resulting in top quality products that are consistent vial to vial.

**FEATURES:**
- No reconstitution errors
- No bovine additives
- Immunodepleted factor deficient plasmas are screened negative for the presence of factor-specific inhibitors
- Packaging and vials are compact and color-coded for easy storage and location in freezers
- Convenient frozen format – ready to use within minutes of thawing
- 8-hour stability once thawed when maintained at 2 to 8 ºC
- Expiry dating of 3 years from the date of manufacture when stored at -40 to -80 ºC
- Quality Control Certificate provided for each lot number
- Source plasmas are screened negative for all FDA-required tests
- Comprehensive selection: Factors II through XII and Prekallikrein

**CRYOcheck** Factor Deficient Plasmas may be used in conjunction with the members of our **CRYOcheck** Gold Standard Family of Assayed Plasmas, including Normal Reference Plasma, Reference Control Normal and Abnormal Reference Controls.
